DETAILED ACTION***Election/Restrictions***

The Applicant argues that the restriction requirement would not be burdensome to the examiner to examine all of the species of the Application. The examiner has considered the arguments and finds them persuasive. The restriction requirement filed on 3/28/05 has been withdrawn. All claims will be examined.

Allowable Subject Matter

Claims 1-18 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art teaches a driver circuit that drive electro-optical elements where there are a current, power, and signal inputs to the driver circuit that control the electro-optical element. The prior art also teaches sram devices that have power, current, and signal lines where the power line is the upper-most layer. The prior art does not teach driver circuits that drive electro-optical elements where the power, current, and signal lines are formed on a wiring board and having the power line formed to be on the uppermost layer and where the current, power, and signal inputs control the electro-optical element by the driver circuit. This combination has been found to be non-obvious, thus novel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
